

In order to encourage Taiwan's primary schools to expand global exchanges with foreign schools, and bridge domestic schools and international partners, we will be able to search for international exchange opportunities with counterparts in Taiwan to conduct online cultural exchanges, aiming to jointly cultivate the international vision and bilingual ability of students in primary and secondary schools.

In line with the implementation of Taiwan's "Bilingual 2030 Policy" The strategy is to start with ICT-based cultural exchange programs, then advance to cooperative teaching or online courses. We hope to build mutual understanding between the younger generation and motivate their interest in learning languages and cultures; also, to empower the future global citizens to gain the vision and ability to understand international issues.
